Flushing Notice

Tuesday, May 13, 2025

A flush of the water system has been scheduled for **Tuesday, May 13, 2025.** This procedure will help clear the lines of sediment, help control the buildup of material on the walls of the pipes, and flush out any “dirty” water. The flushing process involves opening fire hydrants, or blowoff standpipes, and running large volumes of water into the storm drain system.

During this process, the community will experience extended and intermittent periods of low water pressure and, if water is used, the water that is carrying the sediment could be drawn into your residential plumbing lines and water heater. Therefore, **we recommend that you do not use water from 9 am until 4 pm,** at which time the flushing process should be complete.

Also, before you use any water in your home, we recommend opening an outside faucet, or cold water tap inside your house, to make sure the water coming from the mains is clear and no dirty water has been drawn into your service line during the flushing process. If you do have sediment in your water, please run the outside faucet until it has cleared up.

If you have any questions about flushing, please call NW Natural Water Services 360.678.5336

Thank you for your patience during this important maintenance procedure, we apologize for any inconvenience that this may cause.
